

Fast track your career and accelerated your success.

Fast track your career and accelerate your success in the dynamic oil, gas, and power industries. Our accreditation is recognized and valued by many top energy employers, whose teams are among our thousands of program alumni.

1 Choose your certification & apply

Start earning your certification today. We offer two unique options, based on courses taught by recognized industry leaders. Choose the one that meets your career path and goals. There is a \$50 application fee.

2 Earn & save as you learn

Each course earns you DTN credits, including many on-demand courses. At least three courses and 12 credits are required for certification. See the next page for a full list of eligible courses.

Once enrolled, you'll get a special code for a \$200 discount on each live course you take towards your certification. It cannot be used for on-demand courses. Required courses must be completed within 24 months of your enrollment date. If you've completed applicable DTN courses within 12 months prior to your enrollment, they can be applied to your certification credits.

3 Take your certification exam

After earning the required number of credits, certification is a test away. The exam is administered online, at your convenience, for a fee of \$25. Upon passing your exam, you will receive a printed, framed certificate by mail. To maintain your certification, simply take two in-person or eligible online courses a year.

Choose the certification that's right for you:

DTN Certified Energy Professional (CEP)

provides a solid knowledge base in energy industry fundamentals. It's ideal for practitioners in accounting, marketing, sales, management, distribution, support, IT, analyst, operations, industrial, and commercial roles.

DTN Certified Energy Trading Professional (CETP)

provides a foundation in futures, options, derivatives, technical analysis, best practices, and hedging for energy commodities. It's perfect for front, mid, and back office practitioners who trade or support trading functions in the physical or financial energy markets.
